Most quick way to access different file clouds on Linux
Last Updated Thursday, 15 April 2010 13:35

<p>I have tested a lot of tool and services to store files online. I chosen SMEStorage.com and use it now.</p> <p>I found then most problem of online storage services is speed of accessing file.</p> <p>If you need to get some file from your cloud you must to:</p>   start browser open site (ex. smestorage.com) login to site open page with files sometimes you must to browse folders and this is new page/data loading for each folder <p>What to do if you have to get 1 file very quick and with bad Internet connection?</p>   <p>I found simple solution that works fine with slow connections. This is Linux Drive from SMEStorage and Midnight Commander.</p> <p>Linux Drive is tool that mounts SMEStorage file system to local file system (on linux).</p> <p><img src="images/stories/linuxdrive1.png" border="0" /></p> <p>It is possible to browse SMEStorage file system with any filemanager after it is mounted. But, usually, linux filemanagers (in different distributions) try to preload some files (documents, images) to create thumbnails . This is not good. Because time needed to load all files from remote server .</p> <p>I found easy solution - using Midnight Commander. This filemanager doesn't load any files . That is why it works very fast with SMEStorage.</p> <p>So now when i want to get some file very quick from my cloud i:</p> Run SMEStorage Linux Drive and mount it Run Midnight Commander Browse folders and get file <p>This is very fast!</p> <p></p> <p>�</p> <p>�</p> <p>�</p>
